SUMMARY

I build reliable software by combining enterprise quality engineering with modern full-stack development. Enterprise quality engineering (test management, test data, environments) meets modern full-stack delivery — with automation and maintainability designed in from day one.

SKILLS

Languages TypeScript, JavaScript, Python, Java

Frontend React, Next.js, Tailwind CSS, shadcn/ui

Backend Node.js, Next.js, Prisma, PostgreSQL, REST APIs, JWT Auth

Testing & Quality Playwright, Selenium, Vitest, API Testing, E2E Testing, Test Strategy, Test Data Management, Test Environment Management

Cloud & DevOps AWS, GitHub Actions, Docker, Cloudflare, Neon, Vercel, Stripe

EXPERIENCE

Test Manager · Test Data Manager · Test Environment Manager · Swiss Life

Multi-year · Agile enterprise delivery

Enterprise CRM & Digital Platforms

Working within large agile delivery organisations, I help ensure software can be delivered with confidence, quality, and predictable releases. Responsibilities have expanded from traditional QA into enterprise-wide quality engineering and delivery management.

- Lead enterprise test management, quality engineering, and risk-based test strategy across complex CRM and digital platforms.

- Drive Playwright automation, API testing, and integration testing as part of release readiness.

- Own test data management: lifecycle, refresh concepts, pseudo-production environments, governance, and cross-team coordination.

- Coordinate test environments, deployment readiness, and release preparation across multiple Scrum teams.

- Support AWS cloud transformation and cloud-native delivery together with product, engineering, and architecture stakeholders.

- Improve processes continuously so quality becomes a shared delivery signal — not a late gate.

Independent Software Engineer · Freelance / Projects

Ongoing

Web products & SaaS

Alongside enterprise work, I develop modern web applications and SaaS products from idea to production — combining software engineering with enterprise quality engineering.

- Own end-to-end delivery: architecture, frontend/backend, authentication, databases, payments, and deployment. Ship production products such as NavisSedes (ticketing) and Seatly (reservations) with Next.js, Prisma, and cloud data layers.

- Build automated testing and CI/CD into the delivery process from day one.

- Optimise for maintainability, performance, and a clear product experience.

PROJECTS

NavisSedes

A complete event ticketing platform for churches and cultural organisations — interactive seating, Stripe payments, QR tickets, reservations, role-based admin, and check-in workflows.

Next.js · TypeScript · Prisma · PostgreSQL · Neon · Stripe · Playwright · Vitest · Cloudflare

Seatly

A restaurant reservation platform demonstrating modern full-stack architecture with auth, search, booking persistence, and automated testing.

Next.js · TypeScript · Prisma · Neon · JWT · Playwright

Playwright Automation Suite

An enterprise-inspired automation framework using modern testing practices — built as a shippable engineering artifact, not ad-hoc scripts.

Playwright · TypeScript · POM · CI

Elikuren

Modern choir website with a secure member platform — public presence, protected member area, media library, and administration.

Next.js · React · TypeScript · Tailwind

APPROACH

Software engineering with quality built in — not added later. Architecture, automation, CI/CD, and maintainability are part of delivery from the first commit.
